

STEM LEARNING ECOSYSTEMS  
COMMUNITY OF PRACTICE PRESENTS

**You're Invited to join e-space, a series of master classes intended to leverage knowledge and expertise to benefit the entire community of practice.**

These master classes will take the place of our Spring convening, most specifically the Ecosystem to Ecosystem - E2E - workshops.

This is your chance to share the expertise of your Ecosystem!

Once classes are submitted and viewed, we would love to gather smaller groups (based on interest) to discuss implementation, problem solving and next steps.

We hope this is a chance to dive deeper into the powerful work leaders are doing in each of our 94 communities.

**THE FOLLOWING GUIDELINES ARE INTENDED TO HELP YOU DEVELOP YOUR COURSE.**

e-space courses should have:

- Learning objectives & outcomes. (Outline what leaders should expect to gain from the course)
- A brief course introduction. Why someone should take the course!
- Some audio and/or video component (20 min max). It is recommended that you tell a relevant story from your experiences with the topic that you will be teaching.)
- At least one written document to accompany the course for learning. (e.g. questions to consider, implementation frameworks)
- Contact information that people can use for more information.
- Any relevant links for more information.
